An efficient method for the dynamic responses of periodic structures based on the physical features of the structure and group theory

X.Q. Liang , Q. Gao , W.A. Yao

PII: S0020-7403(17)33340-4
DOI: [10.1016/j.ijmecsci.2018.04.028](https://doi.org/10.1016/j.ijmecsci.2018.04.028)
Reference: MS 4283

To appear in: *International Journal of Mechanical Sciences*

Received date: 23 November 2017
Revised date: 4 April 2018
Accepted date: 17 April 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The response of entire structure is converted into that of some small structures.
- The responses of the small structures can be efficiently solved by group theory.
- The optimal parameters for the computational effort are determined.
- The algorithm is highly efficient and greatly memory saving.
