

## Accepted Manuscript

The overall assessment of closed-form solution methods for free vibrations of rectangular thin plates

Yufeng Xing , Qiaozhen Sun , Bo Liu , Zekun Wang

PII: S0020-7403(18)30292-3  
DOI: [10.1016/j.ijmecsci.2018.03.013](https://doi.org/10.1016/j.ijmecsci.2018.03.013)  
Reference: MS 4223

To appear in: *International Journal of Mechanical Sciences*

Received date: 28 January 2018  
Revised date: 10 March 2018  
Accepted date: 12 March 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- The new separable variable closed-form method expands solution range.
- The new separable variable closed-form method is more accurate.
- The iterative separable variable method is easy to use and has no limitations.
- All closed-form solutions are presented in an explicit form.
- The separable variable methods are assessed comprehensively.
