This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- A quasi-dynamic model including the outer ring flexibility and the reaction force of the rigid housing is proposed.
- The outer ring deformation has a great influence on the bearing dynamic characteristics is studied.
- The fit clearance between outer ring and housing cannot be larger than a critical value
