

Accepted Manuscript

A forging method for reducing process steps in the forming of automotive fasteners

Senyong Chen , Yi Qin , J.G. Chen , Chee-Mun Choy

PII: S0020-7403(17)32787-X
DOI: [10.1016/j.ijmecsci.2017.12.045](https://doi.org/10.1016/j.ijmecsci.2017.12.045)
Reference: MS 4109

To appear in: *International Journal of Mechanical Sciences*

Received date: 4 October 2017
Revised date: 22 December 2017
Accepted date: 28 December 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Reducing process steps in automotive fastener production
- Using injection forging to achieve combined material flows
- Examining forming force/energy requirements, material properties and forming quality
- Concluding the feasibility of Injection Forging for the fasteners production for process step reduction
- Recommending process deployment and tool-design considerations
