Structure design and multi-objective optimization of a novel crash box based on biomimetic structure

ChunYan Wang , Yan Li , WanZhong Zhao , SongChun Zou ,
Guan Zhou , YuanLong Wang

PII: S0020-7403(17)33166-1
DOI: [10.1016/j.ijmecsci.2018.01.032](https://doi.org/10.1016/j.ijmecsci.2018.01.032)
Reference: MS 4150

To appear in: *International Journal of Mechanical Sciences*

Received date: 7 November 2017
Revised date: 12 January 2018
Accepted date: 25 January 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- This paper introduces the structural bionics to the structure design of crash box.
- A novel crash box composed of concave shell and NPR structure inner core is proposed.
- In the paper, the human tibia is regarded as the bionic object of the new crash box.
- The functional gradient theory is applied to the design of the inner core.
- AMGA and NSGA-II algorithms are used to execute multi-objective optimization design.
