Tensile behavior of an auxetic structure: analytical modelling and finite element analysis

Jianjun Zhang , Guoxing Lu , Dong Ruan , Zihua Wang

PII: S0020-7403(17)32247-6
DOI: [10.1016/j.ijmecsci.2017.12.029](https://doi.org/10.1016/j.ijmecsci.2017.12.029)
Reference: MS 4093

To appear in: *International Journal of Mechanical Sciences*

Received date: 13 August 2017
Revised date: 18 December 2017
Accepted date: 19 December 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The post-yield tensile behavior of honeycombs with negative Poisson's ratio was firstly reported.
- Analytical modelling is performed by considering the plastic, nonlinear behavior of cell walls.
- Two material models have been studied, a rigid-perfectly plastic material model and that with strain hardening.
- Plastic Poisson's ratio has been obtained analytically by studying the ratio of strain increments in the two principal directions.
