Comprehensive Thermal Performance of Convection-Radiation
Longitudinal Porous Fins with Various Profiles and Multiple
Nonlinearities

A.R. Shateri , B. Salahshour

PII: S0020-7403(17)31968-9
DOI: [10.1016/j.ijmecsci.2017.12.030](https://doi.org/10.1016/j.ijmecsci.2017.12.030)
Reference: MS 4094

To appear in: *International Journal of Mechanical Sciences*

Received date: 19 July 2017
Revised date: 3 December 2017
Accepted date: 19 December 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlight

- The temperature distribution and heat performance of the longitudinal porous fins is presented.
- The radiation heat transfer from porous fin is taken into account and simulated by Roseland model.
- The rectangular, trapezoidal, and concave exponential profiles are considered for fin shape.
- Least square method (LSM) is used for solving the governing equation.
- Heat flux, fin efficiency and volumetric fin performance are used to compare fins with each other.
