Modeling and optimization of MHD mixed convection in a lid-driven trapezoidal cavity filled with alumina-water nanofluid: Effects of electrical conductivity models

Fatih Selimefendigil, Hakan F. Öztıp

PII: S0020-7403(17)32750-9
DOI: [10.1016/j.ijmecsci.2017.12.035](https://doi.org/10.1016/j.ijmecsci.2017.12.035)
Reference: MS 4099

To appear in: *International Journal of Mechanical Sciences*

Received date: 28 September 2017
Revised date: 13 December 2017
Accepted date: 20 December 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- MHD mixed convection in trapezoidal cavity with nanofluid was performed.
- Different electrical conductivity models (σ) were utilized.
- As the value of the Ri enhance, discrepancy between Nu increases for different σ .
- As the value of Ha and φ enhance, discrepancy between Nu enhances for different σ .
