This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A general solution is presented for functionally graded infinite plate with rectangular hole.
- Muskhelishvili's complex variable approach is adopted.
- Material property variation is taken through thickness of the plate.
- The effect of hole geometry, material property variation and loading angle on stresses and moments around hole is studied.
