Vibration analysis of the coupled doubly-curved revolution shell structures by using Jacobi-Ritz Method

Qingshan Wang , Kwangnam Choe , Dongyan Shi , Kinam Sin

PII: S0020-7403(17)31055-X
DOI: [10.1016/j.ijmecsci.2017.12.002](https://doi.org/10.1016/j.ijmecsci.2017.12.002)
Reference: MS 4066

To appear in: *International Journal of Mechanical Sciences*

Received date: 27 April 2017
Revised date: 27 October 2017
Accepted date: 1 December 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A unified vibration analysis method is developed for coupled doubly-curved revolution shell structures.
- The proposed method is appropriate for arbitrary boundary conditions.
- New results are obtained for coupled doubly-curved revolution shell structures subjected to various boundary restraints are presented.
