A method for determining material's equivalent stress-strain curve with any axisymmetric notched tensile specimens without Bridgman correction

Shengwen Tu , Xiaobo Ren , Jianying He , Zhiliang Zhang

PII: S0020-7403(17)32285-3
DOI: [10.1016/j.ijmecsci.2017.12.012](https://doi.org/10.1016/j.ijmecsci.2017.12.012)
Reference: MS 4076

To appear in: *International Journal of Mechanical Sciences*

Received date: 16 August 2017
Revised date: 11 November 2017
Accepted date: 7 December 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A correction function is proposed to determine material's equivalent stress-strain curve with any axisymmetric notched tensile specimens.
- No Bridgman correction is needed.
- The proposed correction function can be applied to perfectly plastic materials.
- The proposed correction function can be used to measure the equivalent stress-strain curve of each individual material zone in a weldment.
