Multi-physics analysis of electromagnetic forming process using an edge-based smoothed finite element method

She Li , Xiangyang Cui , Guangyao Li

PII: S0020-7403(17)31863-5
DOI: [10.1016/j.ijmecsci.2017.10.018](https://doi.org/10.1016/j.ijmecsci.2017.10.018)
Reference: MS 3984

To appear in: *International Journal of Mechanical Sciences*

Received date: 8 July 2017
Revised date: 12 September 2017
Accepted date: 11 October 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A edge-based smoothed finite element method for electromagnetic forming analysis is proposed.
- The Smoothed Galerkin Weak forms are presented in both electromagnetic and mechanical field.
- Transient eddy current and nonlinear dynamic analysis are implemented by present ES-FEM.
- The present method is feasible in solving electromagnetic forming problems.
