Strain-rate dependent deformation mechanism of graphene-Al nanolaminated composites studied using micro-pillar compression

Lei Zhao, Qiang Guo, Zan Li, Zhiqiang Li, Genlian Fan, Ding-Bang Xiong, Yishi Su, Jie Zhang, Zhanqiu Tan, Di Zhang

PII: S0749-6419(17)30516-8

DOI: [10.1016/j.ijplas.2018.02.006](https://doi.org/10.1016/j.ijplas.2018.02.006)

Reference: INTPLA 2302

To appear in: *International Journal of Plasticity*

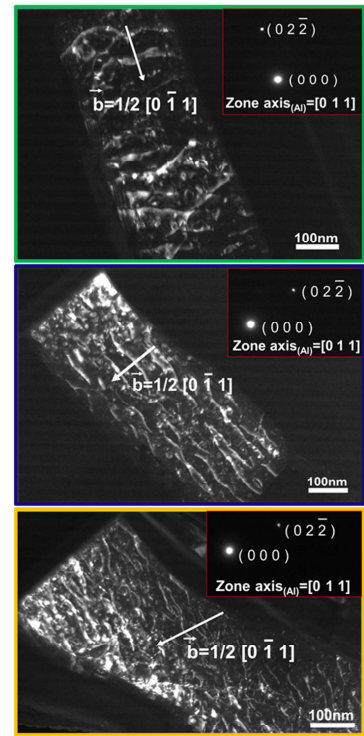

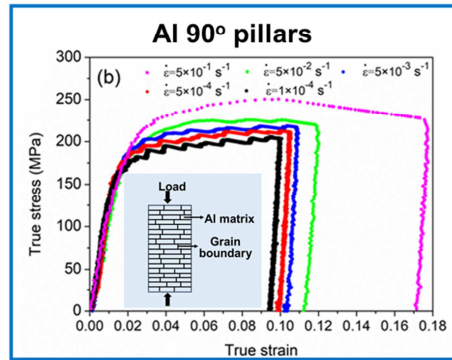

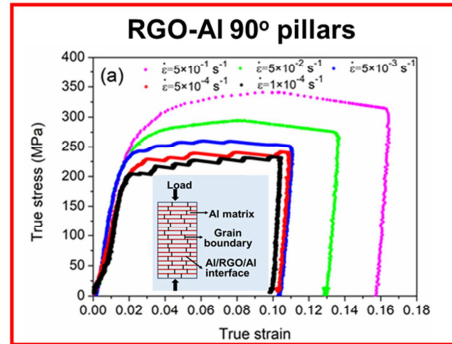

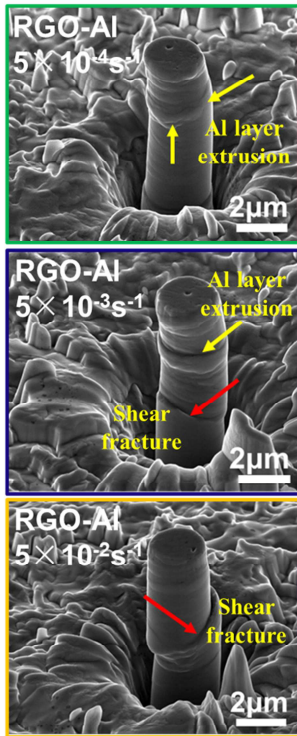

Received Date: 7 September 2017

Revised Date: 26 January 2018

Accepted Date: 10 February 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Transition in deformation mechanism with the increasing strain rates
