Characterization of the misfit dislocations at the ferrite/cementite interface in pearlitic steel: An atomistic simulation study

Jaemin Kim, Keonwook Kang, Seunghwa Ryu

PII: S0749-6419(16)30067-5

DOI: [10.1016/j.ijplas.2016.04.016](https://doi.org/10.1016/j.ijplas.2016.04.016)

Reference: INTPLA 2053

To appear in: *International Journal of Plasticity*

Received Date: 24 February 2016

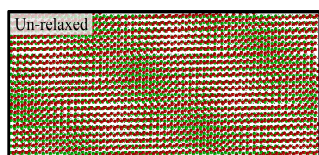

Revised Date: 29 April 2016

Accepted Date: 30 April 2016

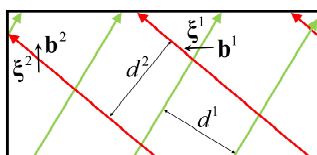

Please cite this article as: Kim, J., Kang, K., Ryu, S., Characterization of the misfit dislocations at the ferrite/cementite interface in pearlitic steel: An atomistic simulation study, *International Journal of Plasticity* (2016), doi: 10.1016/j.ijplas.2016.04.016.

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

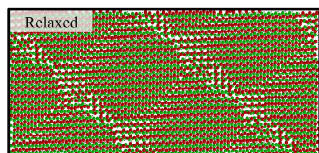

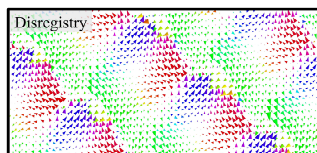

Un-relaxed structure of ferrite/cementite bilayer for PP OR.

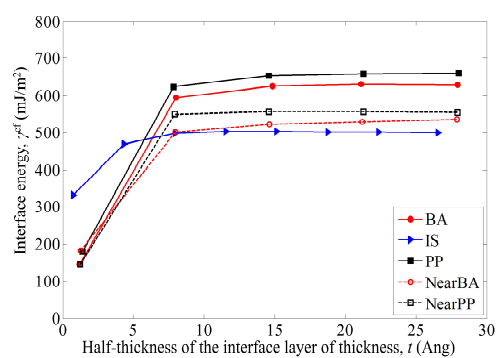

Characterized dislocation structure of ferrite/cementite bilayer for PP OR.

Relaxed structure of ferrite/cementite bilayer for PP OR.

2D disregistry plot of ferrite/cementite bilayer for PP OR.

The interface energies for five ORs with increasing half-thickness of the interface layer of thickness,  $l$ .
