

## Accepted Manuscript

Investigation on Refrigerant Transport by Capillary Effect with Fleecees in an Evaporator for a High Temperature Cooling Machine

Benedict Holbein , Thomas Schulenberg

PII: S0140-7007(18)30199-3  
DOI: [10.1016/j.ijrefrig.2018.05.036](https://doi.org/10.1016/j.ijrefrig.2018.05.036)  
Reference: IJIR 4004

To appear in: *International Journal of Refrigeration*

Received date: 15 January 2018  
Revised date: 28 May 2018  
Accepted date: 29 May 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- An evaporator design using passive capillary transport is presented
- Capillary rise in fleeces is described theoretically
- Fleece properties are determined experimentally
- Fleece supported wetting is observed with evaporation experiments
