This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Determination of influential variables on the optimum COP in two-stage cycles
- Thermodynamic optimization of two-stage cycles with vapor-injection with economizer and flash tank
- Analysis of the influence of the subcooling on the optimum COP in two-stage cycles
- Correlation to estimate the optimum intermediate pressure in two-stage cycles
- Study of the influence of the size of the system components on the COP
