Numerical and analytical investigation of ice slurry isothermal flow through horizontal bends

Jihong Wang , Shugang Wang , Tengfei Zhang , Francine Battaglia

PII: S0140-7007(18)30201-9
DOI: [10.1016/j.ijrefrig.2018.05.038](https://doi.org/10.1016/j.ijrefrig.2018.05.038)
Reference: JIJR 4006

To appear in: *International Journal of Refrigeration*

Received date: 13 March 2018
Revised date: 7 May 2018
Accepted date: 26 May 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Both numerical and analytical models are compared for ice slurry flow in bends
- The k - ε per-phase model provides accurate predictions in solving turbulence of ice slurry
- The secondary flow is improved with increasing flow velocity and decreasing ice fraction
- The phase slip velocity and pressure drop profiles are affected by the secondary flow
