An analytical model for predicting the particle-deposited fin efficiency

Feilong Zhan , Dawei Zhuang , Guoliang Ding

PII: S0140-7007(18)30100-2
DOI: [10.1016/j.ijrefrig.2018.03.021](https://doi.org/10.1016/j.ijrefrig.2018.03.021)
Reference: IJIR 3934

To appear in: *International Journal of Refrigeration*

Received date: 17 December 2017
Revised date: 21 March 2018
Accepted date: 25 March 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- An analytical model of particle-deposited fin efficiency was developed.
- Fin efficiency expressions of annular fin and rectangular fin were obtained.
- Heat transfer rate of fouled heat exchangers was predicted based on the model.
- Experimental validation of the proposed model was performed.
