Experimental performance analysis of a direct-expansion
solar-assisted heat pump water heater with R134a in summer

Xiangqiang Kong , Penglong Sun , Shandong Dong , Kailin Jiang ,
Ying Li

PII: S0140-7007(18)30127-0
DOI: [10.1016/j.ijrefrig.2018.04.021](https://doi.org/10.1016/j.ijrefrig.2018.04.021)
Reference: IJIR 3961

To appear in: *International Journal of Refrigeration*

Received date: 29 December 2017
Revised date: 22 April 2018
Accepted date: 24 April 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A direct-expansion solar-assisted heat pump for domestic hot water supply was built.
- A series of experiments were carried out under typical summer weather conditions.
- The effects of various parameters on the system thermal performance are analyzed.
