This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- Ice is used as cooling medium inside insulated milk-cans
- The same milk-can is used for transporting morning milk or storage overnight
- Bacteria growth is prevented up to 12 hours after milking
- The developed computational model predict cooling curves
- The presented solution is suitable for small-scale farmers and solar applications
