Effect of downward vapor stream on falling film evaporation of R134a in a tube bundle

Chuang-Yao Zhao , Wen-Tao Ji , Pu-Hang Jin , Shun Yoshioka ,
Wen-Quan Tao

PII: S0140-7007(18)30077-X
DOI: [10.1016/j.ijrefrig.2018.02.027](https://doi.org/10.1016/j.ijrefrig.2018.02.027)
Reference: IJIR 3911

To appear in: *International Journal of Refrigeration*

Received date: 12 November 2017
Revised date: 8 February 2018
Accepted date: 13 February 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

1. Tested the influences of downward vapor stream on the falling film evaporation.
2. Designed novel distributors to get uniform liquid/vapor distribution in tube bundle.
3. Defined vapor influencing factor to reveal the effect of vapor flow on heat transfer.
