Investigation of Heat transfer in mechanical draft wet cooling towers using infrared thermal images: An experimental study

Mehdi Rahmati , Seyed Rashid Alavi , Mohammad Reza Tavakoli

PII: S0140-7007(17)30485-1
DOI: [10.1016/j.ijrefrig.2017.11.031](https://doi.org/10.1016/j.ijrefrig.2017.11.031)
Reference: IJIR 3838

To appear in: *International Journal of Refrigeration*

Received date: 2 June 2017
Revised date: 12 November 2017
Accepted date: 25 November 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Influences of input parameters on the cooling tower performance are investigated.
- The temperature distribution is visualized by using captured thermal images.
- Thermal images are utilized to obtain temperature distribution along two directions.
- Regression analysis is employed so as to develop general mathematical equations.
- Some practical procedures are suggested to reach a better performance.
