Numerical and experimental evaluation of ice storages with ice on capillary mat heat exchangers

D. Carbonell, M. Battaglia, D. Philippen, M.Y. Haller

PII: S0140-7007(18)30052-5
DOI: [10.1016/j.ijrefrig.2018.02.007](https://doi.org/10.1016/j.ijrefrig.2018.02.007)
Reference: IJIR 3886

To appear in: *International Journal of Refrigeration*

Received date: 18 September 2017
Revised date: 5 February 2018
Accepted date: 7 February 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- An ice storage model with capillary mat heat exchangers has been developed.
- The model considers the solidification of ice for asymmetric tube configurations.
- The model has been successfully validated with experimental data.
- Averaged root mean square differences in the range of 2 to 6% were obtained.
