Effect of temperature dependent parameters properties on the fin performance under dehumidifying operating conditions

Mohamed Hussein , S. Pashah , Syed M Zubair

PII: S0140-7007(18)30053-7
DOI: [10.1016/j.ijrefrig.2018.02.008](https://doi.org/10.1016/j.ijrefrig.2018.02.008)
Reference: IJIR 3887

To appear in: *International Journal of Refrigeration*

Received date: 30 September 2017
Revised date: 7 January 2018
Accepted date: 12 February 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The finite-element formulation for modeling dehumidifying operating conditions is presented.
- The temperature-dependent thermal conductivity has negligible effects over a considered range of temperature.
- The temperature-dependent heat transfer coefficient has a considerable effect on both dry and wet fins.
- The effect of temperature-dependent properties is the same for the isotropic and orthotropic materials.
