This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

# Effects of duplex jets high-pressure coolant on machining temperature and machinability of Ti-6Al-4V superalloy

## Graphical Abstract

## Abstract

Effective heat removal from cutting zone is expected to ensure favorable machinability. In this regard, turning of Ti-6Al-4V (grade 5) has been conducted under the implementation
