

Increasing damage tolerance in composites using hierarchical
brick-and-mortar microstructures

J. Henry, S. Pimenta

PII: S0022-5096(18)30212-6
DOI: [10.1016/j.jmps.2018.06.003](https://doi.org/10.1016/j.jmps.2018.06.003)
Reference: MPS 3360

To appear in: *Journal of the Mechanics and Physics of Solids*

Received date: 12 March 2018
Revised date: 18 May 2018
Accepted date: 2 June 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Self-similarity cannot predict accurately the response of hierarchical composites
- Failure mechanisms involve interactions between the different hierarchical levels
- Hierarchical composites are more damage tolerant than conventional composites
- Hierarchical composites are less sensitive to manufacturing defects like ply-shifts
