This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

HIGHLIGHTS

- The morphology of SiC causes anisotropic load transfer in composite.
- A load rebalancing phenomenon is observed at the middle of elastic stage.
- The load rebalancing phenomenon is caused by plastic deformation of metal matrix.
