Discontinuities in Effective Permeability due to Fracture Percolation

Jeffrey D. Hyman, Satish Karra, Carl W. Gable, Hari Viswanathan,
J. William Carey, Esteban Rougier, Zhou Lei

PII: S0167-6636(17)30468-4
DOI: [10.1016/j.mechmat.2018.01.005](https://doi.org/10.1016/j.mechmat.2018.01.005)
Reference: MECMAT 2840

To appear in: *Mechanics of Materials*

Received date: 31 July 2017
Revised date: 11 January 2018
Accepted date: 25 January 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

1 HIGHLIGHTS

- 2 • We characterize how permeability changes with fracture network connectivity
- 3 • A jump in effective permeability occurs when the fracture network percolates
- 4 • A power-law relationship between jump size and material properties is observed
