Optimal microstructures of elastoplastic cellular materials under various macroscopic strains

Wei Chen , Liang Xia , Jie Yang , Xiaodong Huang

PII: S0167-6636(16)30143-0
DOI: [10.1016/j.mechmat.2017.10.002](https://doi.org/10.1016/j.mechmat.2017.10.002)
Reference: MECMAT 2803

To appear in: *Mechanics of Materials*

Received date: 11 July 2016
Revised date: 6 March 2017
Accepted date: 2 October 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The inverse strain energy-based homogenization is established for elastoelastic materials;
- Topology optimization algorithm for designing elastoelastic cellular materials is proposed;
- Various microstructures of optimized nonlinear cellular materials are obtained.
