Materials based design of structures: computational modeling of the mechanical behavior of gold-polymer nanocomposites

Swantje Bargmann, Celal Soyarslan, Edgar Husser,
Natalia Konchakova

PII: S0167-6636(15)00242-2
DOI: [10.1016/j.mechmat.2015.11.008](https://doi.org/10.1016/j.mechmat.2015.11.008)
Reference: MECMAT 2512

To appear in: *Mechanics of Materials*

Received date: 22 May 2015
Revised date: 2 November 2015
Accepted date: 9 November 2015

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A crystal plasticity-viscoplasticity gold-polymer composite modeling framework
- Investigation of the influence of the gold content, ligament size and connectivity
- Separate parameter identification for gold and epoxy resin constituents
- Captured characteristics of the response curves, gained stability with impregnation
