Dynamic properties of bolted joints in laminated composites
evaluated using flexural wave propagation

Yunsang Kwak , Sangmok Park , Junhong Park

PII: S0093-6413(17)30540-2
DOI: [10.1016/j.mechrescom.2018.07.004](https://doi.org/10.1016/j.mechrescom.2018.07.004)
Reference: MRC 3286

To appear in: *Mechanics Research Communications*

Received date: 9 October 2017
Revised date: 27 June 2018
Accepted date: 8 July 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Mechanics Research Communications. Year	Publication Office: Elsevier UK
Editor-in-Chief: A. Rosato New Jersey Institute of Technology, Newark, New Jersey, USA Anthony.Rosato@njit.edu	

Highlights

- A method to measure the dynamic properties of the joint on composites was presented.
- The wave approach was used to analyze interactions between structures and joints.
- Wave propagation on the joints was predicted by dynamic stiffness and loss factor.
- The dynamic properties of the joints were derived for different clamping forces.
