

Accepted Manuscript

An integrated approach for system functional reliability assessment using Dynamic Bayesian Network and Hidden Markov Model

Sinda Rebello , Hongyang Yu , Lin Ma

PII: S0951-8320(18)30034-6
DOI: [10.1016/j.ress.2018.07.002](https://doi.org/10.1016/j.ress.2018.07.002)
Reference: RESS 6199

To appear in: *Reliability Engineering and System Safety*

Received date: 9 January 2018
Revised date: 27 June 2018
Accepted date: 4 July 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- **System functional reliability analysis in spite of sparse historical failure data**
- **Monitored system process variables used for real-time system reliability evaluation**
- **The measurement process uncertainties are incorporated using virtual evidence**
- **The system DBN model enables fault identification at component level**
