This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The approach takes into account the complexity of failure mechanisms as a system.
- The diagnostic algorithm enables to detect active failure mechanisms and track their progression.
- The prognostic algorithm enables to predict the occurrence of failure modes dynamically as new information becomes available.
- The simplicity of the algorithms and graphical representation of the results helps to build decision-makers' trust.
- A case study on hydroelectric generator stator is proposed.
