Stochastic corrosion growth modeling for pipelines using mass inspection data

Markus R. Dann, Marc A. Maes

PII: S0951-8320(17)30987-0
DOI: [10.1016/j.ress.2018.07.012](https://doi.org/10.1016/j.ress.2018.07.012)
Reference: RESS 6211

To appear in: *Reliability Engineering and System Safety*

Received date: 22 August 2017
Revised date: 2 June 2018
Accepted date: 11 July 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Framework for pipeline corrosion growth modeling without feature matching
- Inspection errors such as sizing, detection, and false call errors are considered
- Decomposition of the corrosion growth for old and new features
- Computationally efficient method handling large inspection data for full system analysis
