Reliability allocation model and algorithm for phased mission systems with uncertain component parameters based on importance measure

Xin-yang Wu , Xiao-yue Wu , Narayanaswamy Balakrishnan

PII: S0951-8320(17)30244-2
DOI: [10.1016/j.ress.2018.07.022](https://doi.org/10.1016/j.ress.2018.07.022)
Reference: RESS 6221

To appear in: *Reliability Engineering and System Safety*

Received date: 26 February 2017
Revised date: 11 July 2018
Accepted date: 18 July 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A model for reliability allocation problem of PMS with uncertainty is proposed.
- A hybrid heuristic algorithm is presented based on a global importance index.
- The effectiveness of the model and algorithm for PMS are demonstrated.
- The efficiency of the algorithm can be improved by using component importance.
