Bayesian network modelling and analysis of accident severity in waterborne transportation: a case study in China

Likun Wang , Zaili Yang

PII: S0951-8320(18)30135-2
DOI: [10.1016/j.ress.2018.07.021](https://doi.org/10.1016/j.ress.2018.07.021)
Reference: RESS 6220

To appear in: *Reliability Engineering and System Safety*

Received date: 4 February 2018
Revised date: 28 June 2018
Accepted date: 18 July 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Analysis of accident severity in waterborne transportation.
- Collection and statistical analysis of maritime accident data over 30 years.
- Identification of key factors influencing maritime accident severity using data-driven BN and expert verification.
- Dynamic prediction of maritime accident severity under high uncertainties.
