This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- a generalized dynamic reliability model based on SSI theory is proposed for calculating the
- system reliability under complex load;
- Gauss-Legendre quadrature formula is used to calculate the system reliability with a high accuracy;
- applicability and accuracy of the proposed method have been validated by a case.
