Structural Health Monitoring data fusion for in-situ life prognosis of composite structures

Nick Eleftheroglou , Dimitrios Zarouchas , Theodoros Loutas ,
Rene Alderliesten , Rinze Benedictus

PII: S0951-8320(17)30673-7
DOI: [10.1016/j.ress.2018.04.031](https://doi.org/10.1016/j.ress.2018.04.031)
Reference: RESS 6157

To appear in: *Reliability Engineering and System Safety*

Received date: 7 June 2017
Revised date: 16 April 2018
Accepted date: 29 April 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A novel data fusion methodology is proposed utilizing heterogeneous SHM data.
- Utilization of a stochastic model for the prognostic task with fused SHM data.
- Two new prognostic performance metrics are introduced and validated.
