

Accepted Manuscript

A novel support vector regression method for online reliability prediction under multi-state varying operating conditions

Tao Tao , Enrico Zio , Wei Zhao

PII: S0951-8320(17)30475-1
DOI: [10.1016/j.ress.2018.04.027](https://doi.org/10.1016/j.ress.2018.04.027)
Reference: RESS 6146

To appear in: *Reliability Engineering and System Safety*

Received date: 22 April 2017
Revised date: 20 April 2018
Accepted date: 27 April 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A data-driven method is proposed for prognostics in multi-state operating condition.
- Features are developed to assess different reliability evolution trends.
- A sequential Monte Carlo framework is adopted for the online prediction.
- The proposed method is applied with several electrical and mechanical applications.
- The prediction accuracy, robustness and speed are evaluated.
