Software Reliability Prediction Using a Deep Learning Model based on the RNN Encoder–Decoder

Jinyong Wang , Ce Zhang

PII: S0951-8320(17)30353-8
DOI: [10.1016/j.ress.2017.10.019](https://doi.org/10.1016/j.ress.2017.10.019)
Reference: RESS 5987

To appear in: *Reliability Engineering and System Safety*

Received date: 23 March 2017
Revised date: 18 October 2017
Accepted date: 21 October 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- we are the first to propose a Deep-learning model to predict software reliability.
- The Deep-learning neural network model has better prediction performance than other models.
- The Deep-learning model has better robustness in software reliability prediction.
