Optimal work distribution and backup frequency for two non-identical work sharing elements

Gregory Levitin , Liudong Xing , Yuanshun Dai

PII: S0951-8320(17)30689-0
DOI: [10.1016/j.ress.2017.10.016](https://doi.org/10.1016/j.ress.2017.10.016)
Reference: RESS 5984

To appear in: *Reliability Engineering and System Safety*

Received date: 11 June 2017
Revised date: 28 September 2017
Accepted date: 21 October 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Heterogeneous two-element work-sharing systems are considered.
- Incremental backups in such systems are studied.
- Mission success probability and expected mission completion time are derived.
- Optimal work distribution and backup frequencies are obtained.
