This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Investigate methods for integrating multilevel prior information and data through Bayesian melding method
- Update subsystem prior and posterior using system level reliability prior and data
- Posterior reliability inferences using an adaptive sampling importance re-sampling method under multilevel priors and data
- Evaluate system reliability assessment outcomes with varying sample sizes
