This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- A new method for the identification of leading indicators in healthcare is proposed.
- The presented method was built on the concept of Functional Resonance Analysis Method.
- The method was demonstrated on the case of a complex healthcare process, the early detection of sepsis.
- The method consist of six overall steps to determine leading indicators of various healthcare processes.
