

Author's Accepted Manuscript

Fabrication and characterization of highly porous barium titanate based scaffold coated by Gel/HA nanocomposite with high piezoelectric coefficient for Bone Tissue Engineering Applications

Arian Ehterami, Mansure Kazemi, Bahareh Nazari, Payam Saraeian, Mahmoud Azami

PII: S1751-6161(17)30587-8
DOI: <https://doi.org/10.1016/j.jmbbm.2017.12.034>
Reference: JMBBM2637

To appear in: *Journal of the Mechanical Behavior of Biomedical Materials*

Received date: 10 November 2017
Revised date: 25 December 2017
Accepted date: 29 December 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting galley proof before it is published in its final citable form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Fabrication and characterization of highly porous barium titanate based scaffold coated by Gel/HA nanocomposite with high piezoelectric coefficient for Bone Tissue Engineering Applications.
