This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- In this paper, we give a new numerical method for solving a linear system of fractional integro-differential equations.
- The fractional derivative is considered in the Caputo sense. The proposed method is least squares method aid of Hermite polynomials.
- The suggested method reduces this type of systems to the solution of systems of linear algebraic equations.
- Numerical results show that this approach is easy to implement and accurate when applied to integro-differential equations.
- We show that the solutions approach to classical solutions as the order of the fractional derivatives approach.
