This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We obtain the solitary wave solutions of the generalized Zakharov-Kuznetsov-Benjamin-Bona-Mahony nonlinear evolution equation
- We employ the $\exp(-\phi(\xi))$ -expansion method of our purpose.
- We make and represent a good comparison between our solutions.
- We conclude the overrun of the $\exp(-\phi(\xi))$ -expansion method for other methods.
