Effect of laser fluence, nanoparticle concentration and total energy input per cell on photoporation of cells

Stefany Y. Holguin, Naresh N. Thadhani, Mark R. Prausnitz

PII: S1549-9634(18)30087-X
DOI: doi:[10.1016/j.nano.2018.04.015](https://doi.org/10.1016/j.nano.2018.04.015)
Reference: NANO 1796

To appear in:

Received date: 23 January 2018
Revised date: 18 April 2018
Accepted date: 18 April 2018

Please cite this article as: Stefany Y. Holguin, Naresh N. Thadhani, Mark R. Prausnitz, Effect of laser fluence, nanoparticle concentration and total energy input per cell on photoporation of cells. The address for the corresponding author was captured as affiliation for all authors. Please check if appropriate. This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Effect of laser fluence, nanoparticle concentration and total energy input
per cell on photoporation of cells

Statement of funding: This work support by National Science Foundation Grant No. 1510028 and DTRA Grant No. HDTRA-1-12-1-0052. S. Holguin acknowledges fellowship support from the Georgia Tech University Center of Exemplary Mentoring, an Alfred P. Sloan Foundation Fellowship and a National Science Foundation Graduate Research Fellowship under Grant No. DGE-1148903.

Conflict of Interest: The authors declare no conflict of interest with the subject matter or materials discussed in the manuscript.

Abstract: 150 words

Complete manuscript: 4672 words

Number of references: 40; Number of figures/tables: 8 figures, 1 table
