Title: The state of research on the genetics of autism spectrum disorder: methodological, clinical and conceptual progress

Authors: Anne B Arnett, Sandy Trinh, Raphael A Bernier

PII: S2352-250X(18)30099-X
DOI: <https://doi.org/10.1016/j.copsyc.2018.07.004>
Reference: COPSYC 680

To appear in:

Please cite this article as: Arnett AB, Trinh S, Bernier RA, The state of research on the genetics of autism spectrum disorder: methodological, clinical and conceptual progress, *Current Opinion in Psychology* (2018), <https://doi.org/10.1016/j.copsyc.2018.07.004>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Genetics in ASD

The state of research on the genetics of autism spectrum disorder:
methodological, clinical and conceptual progress

Short Title: Genetics in ASD

Anne B. Arnett, Ph.D.^a

Sandy Trinh, M.S.^a

Raphael A. Bernier, Ph.D.^a

The state of research on the genetics of autism spectrum disorder: methodological, clinical and
conceptual progress

Highlights

- Heterogeneity in autism spectrum disorder presents a challenge to clinical care and research.
- Genetic sequencing indicates disruptive gene variants and CNVs account for over 30% of ASD cases.
- A genotype-first approach offers scientific, clinical and psychosocial benefits.
- Whole genome sequencing promises further advances in identifying genetic causes of ASD.
- Advancements in genomic sequencing precipitate progress toward precision medicine care for ASD.
