This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- People's attachment networks are small and hierarchical
- One attachment figure fulfills most of people's attachment needs
- Attachment style predicts networks characteristics and management
- Attachment insecurity impedes network management
- Attachment insecurity is negatively associated with networks characteristics
