This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Manipulations in multiple sensorimotor modalities activate abstract constructs
- Multimodal priming effects can occur through embodied metaphors
- Metaphorical and non-metaphorical relations vary on two psychological dimensions
- The two dimensions are structure projectability and attribute salience
- For theoretical advances, several thorny issues need to be resolved
